

JENNA GARZA

BIOLOGY MAJOR (BACHELORS PROGRAM)

Profile

I As a biology major wanting to pursue a professional job in pharmaceutical sales some values I have learned to appreciate are the way I'm able to communicate, the honesty I hold and responsibility I take accountability for. My communication skills might be looked at as people skills, something this generation unfortunately lacks. I'd say I'm already very easy going, but efficient, dependable always.

My job objective is to pursue a professional career in pharmaceutical sales. Everyone starts somewhere, so of course I'm seeking an entry level position or internship in this field. It would be a great way to use my honesty from my knowledge, the communication skills I hold, and the confidence that I bring.
